If no lights coming on in the dashboard and no other electrical consumers work, the battery could be completely dead or there is no connection between the battery and the vehicle electrical system. Check if the battery terminals look tight. If the battery is completely dead, jump starting might help. In this case, try turning the steering wheel left and right while gently jiggling the ignition key â€" this might help to release the steering lock. Check the battery and the terminal cable connections. If they look really corroded, you need to clean the battery posts and cable connectors or replace the cables and try to start the engine. Also check the starter. The solenoid attached to the top of the starter can fail, as well as the components inside. Replace starter solenoid, starter contacts, starter assembly or repair starter circuit as required. Very often this could be caused by a low battery or poor connection between the battery and starter. There are many possible causes, but we know it is neither a battery nor a starter problem. Just remember: a vehicle will always require air, fuel, and the ignition to operate. Check the fuel. If the wrong amount of fuel is being injected into the combustion chamber, or being injected at the wrong time, the engine will not start. Again, this will be a case where the engine cranks over, but will not actually run. This could be caused by a few different parts including the fuel pump, fuel filter, fuel injectors, and fuel lines. Some of those options are a stretch, but do have an effect on the system. Start with the fuel injectors, and make sure they are clean. Check the spark. Without spark to ignite the fuel mix in the combustion chamber, the engine will not start. Spark issues are not limited to the plugs. Check the spark plug wires, the distributor or module, and plug gap. These all have a huge effect on the function of the ignition system. This is super well written and organized. Thank you! Troubleshooting was very easy with this guide. Your email address will not be published. Save my name, email, and website in this browser for the next time I comment. Featured Brands. Reviews Questions, Answers. Since , Bosch has developed innovative productsâ€"including spar Jul 03, Perfect fit. I bought this for my mom's Honda Civic LX and it fit perfect. Installation is challenging due to the small access, but the car started right away with no issues. The shipping box did have a small gash but that's due to shipping. So far I would definitely trust the quality. Purchased on Mar 09, Helpful Automoti

ve Resources. Electricity then flows from the battery, through the starter relay, and to the starter solenoid. Bad Starter Solenoid Symptoms Although you may have heard of a starter solenoid, you might not know what the part actually does. Basically, the starter solenoid is an electromechanical device that engages the starter motor. Most starter solenoids are mounted directly on top of the starter. The Starting System Because batteries emit hydrogen gas while charging, the battery case cannot be completely sealed. Years ago there was a vent cap for each cell and we had to replenish the cells when the electrolyte evaporated. If your engine cranks normally but does not start, the starter motor is not to blame. Automotive professionals break down no-start situations into two separate categories: crank-no-start and no-crank-no-start. Contact Us. Phone Number Shop with Confidence. All Rights Reserved.
