Rolls-Royce's "Spirit of Ecstasy" hood ornament â€" or mascot, as the British call them â€" is one such emblem. First sculpted by Charles Sykes in the early 20th century, it was designed to dazzle. She said she was under the impression, based on what the dealer told her, that the large sculpture was a period prototype of "The Spirit of Ecstasy" that Sykes sculpted for Rolls-Royce. But decorative-arts appraiser Nick Dawes had to deliver the news that from details in the pieces' casting and bases, both appeared to him to be modern reproductions. After the Chicago event, we followed up with Dawes and asked him to share some advice from his long career in the business, in hopes of helping antiques shoppers who might be considering making a big purchase. Here's what Dawes had to say:. Most dealers and auctioneers are honest and forthright, but some will make up stories in order to make a sale, so as the saying goes, if a story or a deal sounds too good to be true, it probably is. Be careful of making a big impulse buy. Sometimes you do need to act quickly to secure something you're interested in, but be wary of acting rashly. It pays to reach a friend with experience in the business that you trust â€" a seasoned dealer or auctioneer, for example, and most professionals you have a relationship with will offer their advice free of cost or obligation, providing there is no conflict of interest. Discuss the terms of sale, including the return policy, before making the purchase. It is perfectly acceptable for a seller to say:. Buyers should also be sure to discuss "What If" situations they may be concerned about before completing the transaction. Examples may include â€". Your purchases are governed by certain consumer-protection laws, but these are often complex, they vary between states, and also may be expensive to actually use in a dispute. It is largely your responsibility to protect yourself as a consumer, and these simple tips will go a long way towards this. Go inside the movement for women's workplace equality in the 's. Discover the surprising ancestral stories of a variety of public figures. William Austin Burt patented the U. We're soaking up the story behind this LeslieKeno appraisal! Spirit of Ecstasy? Unfortunately, they turned out not to be old at all, but modern reproductions. Support provided by: Learn more. A weekly collection of previews, videos, articles, interviews, and more! Appraiser Nicholas Dawes shares his expert advice for art and antiques shoppers on the hunt. There are many ways to avoid unintentionally purchasing reproductions. One of them, Dawes explains, is to make sure to get and keep a receipt of purchase. Prev Next. About the Author Luke Crafton. More from PBS. Our Ecstasy series heads were designed to breath like sweet old amps The features allow the "DNA" of the 3 distinctly voiced channels to be radically morphed into sounds of the past, present and future. By using our foot controller you can access six tuned variations of these channels instantly. Imagine going from our notorious barking Plexi mode, to the greasiest, harmonically chewy overdrive and then washing it all down with the lushest most decadent clean tone. In we celebrated our 20th year of Bogner USA and wanted to create something special for our amplifier line; enter the 20th Anniversary Ecstasy. We consider this model to be the new "Flagship" in the Ecstasy line with the most organic and open sound yet. Available as an option to the base model the 20th Anniversary Ecstasy has a real plexi panel with gold background and a different pre-amp circuit as well as a foot control able boost feature in the plexi mode. Up until late the amp was housed in a slightly larger head shell for an iconic and classic vintage vibe. Click the "M" and "S" icons on the top for details, any picture or the camera icon to open the picture gallery! Please note from January on the 20thA model will come in the small Ecstasy head enclosure! The 20th Anniversary is our finest evolution of the Ecstasy line that started with the B, B and Classic. However, the 20th Anniversary model features it's own unique circuit and many refinements never before seen. In the past few years many new boutique capacitors have come on the market such as the Sozo and Jupiter brand which focus on replicating the vintage capacitors from the 60's. These new capacitors are very expensive and mostly hand made in their construction so we were intrigued to hear how they sound. We purchased all the available brands and meticulously went trough the entire signal chain of our Ecstasy circuit incorporating these vintage style capacitors into the design. However, once this process started, we quickly realized that replacing the capacitors was only the beginning, additional adjustments and refinements were implemented to maximize the vintage tonal character of these new capacitors which all together give the 20th Anniversary it's iconic Golden-Era of Ecstasy tone. Now does this mean the other Ecstasy's have lower grade capacitors? No not at all, we use mainly the German made Wima capacitors and these are the best tonal choice for different circuit designs. Especially for pc mount construction in highly complex circuits where space is of concern. Look into your old Vox and you will see classic Wima branded capacitors. It's not just about replacing components, but rather, how you integrate the components into the overall circuit, making fine-tune adjustments to balance the final design. Every component must be considered and optimized depending on the circuit to work effortlessly together in reaching our goal of creating an inspiring amplifier for you. Additional refinements have been made including: The pre EQ's 2 and 3 have been shifted and a vintage modern style switch lets you decide the overall flavor of Channel 2 and 3, bypassed when in the plexi mode. The plexi channel has slightly more gain and a foot controllable boost was added which expands the amp to have 6 sounds on tap via your foot. Boost is engaged with the same switch as for Channel 2 and 3. The clean channel has been changed; special emphasis was taken to the boosted mode which gives you more gain with nicely balanced frequencies and compression. Power amp dampening was adjusted to compliment the new pre amp design, the Excursion switches so to speak. The 20th Anniversary amp was designed and features 6L6 power amp tubes standard but can be custom order with EL34's. Like the first generation B the master volume is on the front panel with one set of excursion and presence controls. To start I want to tell you a bit about the history of the Ecstasy. The first model the B was released over two decades ago in it was the time when most of the people where using external multi channel pre-amps to achieve a vast variety of sounds, some used multiple amp setups. Reinhold realized two things early on, a split system of pre and power amp can not give you the dynamics and response of a single circuit which incorporates both, second there is a need to make an amplifier head which covers a huge tonal pallet of tones but with the organic feel and tone of the good old amps from the 60's. At that time the Ecstasy was in a class by itself as the most flexible amplifier and defined the word boutique amp. Eric Johnson a purist and the Godfather of multi amp setups tried the amp and bought one and took it immediately on the joint tour with BB King, it might be very well the only multi channel amp he ever owned. In the B was introduced with features never found in any guitar amplifier at that time; the channel assignable internal speaker cabinet switching system and power attenuator loop as well as the dual presence with our so called Excursion power amp dampening control. Further the clean channel was expanded with an additional gain stage as well as a boost function, next to sparkling cleans one could get the dirty tones of the small combo's of the 50's and 60's. The effects loop could be run in series or parallel with an added mix control. The internal load

resistor was taken out as nobody seemed to use it, the variac switch had to go as it was not possible to sustain the current to switch all the new functions consistently but a switch was added to choose between class AB or A. Cosmetically the amp was now also offered with the for Bogner custom made basket weave grill. All in all with no competition Reinhold raised the bar to a new level. In the B was revised; rather then incorporate everything certain functions where offered as options. The Chassis color was changed from white to black. In the Classic option was introduced. Since only one hundred B models were built and the amp became rare Reinhold wanted to offer a model with slightly less features which sits somewhere between the and B. The Classic featured a chrome front panel and a more open, organic feel and tonality. In the red channel of the B received a gain increase since many customers were asking for more gain with an easier to play feel. This was not Reinhold's optimal choice as it also made for a more compressed and focused tone but since there was the Classic option available for the more open and less compressed sound, he was okay with the change. To mark the special occasion Reinhold developed the 20th Anniversary Ecstasy. Incorporating many circuit refinements, vintage style capacitors and redesigned cosmetics, the new 20th Anniversary Ecstasy offers massive, iconic and inspiring tone. This Unit is currently located in Columbus OH. Make Custom Built Motorcycles. No shipping available. Questions contact Richard at Vehicle specifications Engine: V8 new crate motor. Miles on odometer oh what's on the motor. Body style: pick up truck Transmission: three speed automatic Odometer reading: Vehicle features and options Air conditioning, defrost, front disc brakes, heat, leather seats, power brakes, power windows, seatbelts, tilt wheel Seller remarks This neat little Ford truck is what craftsmanship is all about. Not content to just build one like the other guys, this two-tone hauler offers a gorgeous hand-made bed that works in conjunction with a fantastic color scheme to deliver a Blue Oval pickup like none other. The finish is show-worthy in every way, with fantastic prep work underneath to make that high-visibility shine really stand out. The Ford sheetmetal hasn't been modified beyond the bed itself, so it has its original barrel-shaped grille and classic good looks that have remained popular for decades. Nothing has been chopped, so it has an old-fashioned look that's quite appealing, and with the natural lines on the body it was easy to make the two-tone combination work. The bed is made of quarter-sawn oak, which makes for some spectacular patterns and it's insanely expensive to mill it that way, making this a very special truck. Workmanship is exceptional and you'll probably find that there are cabinetmakers who will admire this truck as much as hot rodders. The bright interior is totally custom and a big step up from the original in terms of luxury and comfort. That bench seat is leather, not vinyl, and has been stitched to look suitably retro. Matching door panels were created at the same time, along with some custom carpets with matching yellow piping, just for effect. There is no radio, but when your truck looks and sounds this cool, it's kind of redundant anyway. And please take a moment to admire the way the clock is integrated into the dash, which is a great way to blend old features and new ideas. A brand new cubic inch Chevy crate motor lives under the Ford's rounded hood and provides the kind of reliable power that a rod like this demands. It's nicely outfitted with a shiny air cleaner and finned aluminum valve covers, so it has a hot rod look, and the mechanicals are all proven components that offer decent service access. It sports the ubiquitous 4-barrel carburetor up top and a custom exhaust system underneath, complete with Flowmaster mufflers and polished tips poking out from underneath. Ford's original frame still lives under this truck, now reinforced and fitted with a Mustang II independent front end and disc brakes, not to mention more vivid paint. The transmission is a TH 3-speed automatic which powers an 8-inch Ford rear end with 3. There's a lot here to appreciate, so give it a good once-over and be prepared to be impressed. Call now! Make Other. I do not always have access to email if interested you are welcome to call me at Make Custom. This is a Factory made Trike by Ecstasy Inc. This thing will turn heads wherever you go. It ride and drives perfect. A well designed machine perfectly balanced, great in turns, seats 3, has a seat belt but is not required to wear it, it is a motorcycle and conforms to Laws there of. Has a Kicker DX Amp. I am the second owner, it has 73, original miles and has been well maintained. The Engine is a Chevy small block, turbo Automatic transmission with Hurst, Shift o matic 2, Tons of chrome inside and out and underneath. And I have the manual with a list of every part used to make it. Gear oil was changed about miles ago, Transmission pan replaced and seals just done, as well as Oil filter and Mobil 1 synthetic oil change. In some of the last pictures, there are Flags., Missions, so I will be keeping them. If you have any questions feel free to call. Ask for Kurt P. Cash or Bank Draft will be in My account before this leaves my garageâ€‹. Model Trike. Make Aprilia. Model Rsv4. Bike is in perfect powerful running condition with first service done by an authorized Aprilia dealer. No Damages, scratches or any flaws. All OEM take off plastics included as well. Please call for further details and or best offers. I am only selling to replace with something else. This V4 motor is unlike anything I've ridden and is

hands down unique in sound and power delivery. Of course more suited for track but is absolutely great for typical road riding. I've rode this bike for hours and have had no problems with back and or neck problems! One owner, miles, garaged! Custom installed sound system, removable hardtop with rear window and moon roof This is the most fun you will have with your clothes on! Needs some cleaning up but decent condition and runs well. Seats with rumble seat. A soft top is also available for this models. Instructions are not included with the Rolling or Complete Kits. There is no welding required. The frame and fenders can be painted as an option on the Rolling Kit, while the Complete Kit includes a silver frame and fenders as standard. All other parts needed to finish this kit are available directly from Ecstasy Cycles Corp. NOTE: A non-refundable down payment is required to place a kit order, establish a production date, and lock in current pricing. Models: Rebel R short frame model -- includes 10 cu. The engine and transmission comes already mounted to the frame. The kit will have the primary wiring harness laid in. Among other things, the customer would have to complete wiring hookups including fuse panel , install all plumbing i. Alamo Heights, TX. Fairbury, IL. Eaton, NH. Cheyenne, WY. Lebanon, OH. Lyles, TN. As demons corrupt and destroy the material planes, they retain some of the energy that would otherwise return to the forges of creation. Swollen with stolen vitality, the Matriarchs are larger and possess more personality than their lesser brethren. Their power acts like a lodestone, bringing followers to their call and commanding obedience and respect. Matriarchs of Ecstasy tend to follow one of three paths: the Priestess, the Noble, or the Feral. Adherents to each path have a specific focus that allows them to harvest and retain even more energy. A Matriarch that has become imbued with enough power can shed the vestiges of personality and become a true embodiment of Ecstasy, evolving into a glorious Queen. For those too mired in the petty concerns of individuality, rebirth as a demonic Lady awaits. The Matriarch set comes with all three Matriarchs: The Priestess, the Noble, and the Feral, along with two additional prisoner models. One prisoner has a sci-fi theme, and the other a fantasy theme. They can be attached to the Feral Matriarch if desired. The Matriarchs are hand cast in pure, unfilled, resin. Models are unassembled and unpainted. Purchase this Product and Earn 59 Creature Coins. This attachment makes it also resemble the structure of the hallucinogen mescaline. Like amphetamines, MDMA is a synthetic substance that does not exist in nature. Similarly to amphetamines and cocaine, MDMA can exist as a free base or as salts of various acids. Unlike these drugs, however, MDMA tends not to be inhaled in its free base form. This is because the methylenedioxy group raises the boiling point of the free base so high that it becomes too difficult to use in such a manner Shulgin. The salts are not volatile, but are quite soluble in water and thus can be administered intravenously, orally or intranasally. Pharmacokinetics MDMA is readily absorbed from the gastrointestinal tract. Onset of action is within 30 minutes and peak serum levels occur after one to three hours Mas, Farre, de la Torre, Roset et al. The elimination half-life is approximately seven hours Mas et al. Like amphetamines, alkaline urine can increase the half-life of MDMA to hours. MDMA is metabolised in the liver to

an active metabolite methydioxyamphetamine , which has a longer half-life 16â€"38 hours. Whilst the enzyme cytochrome P 2D6 is mainly responsible for the metabolism, other enzymes are also involved Lin, Di Stefano, Schmitz, Hsu et al. Some of these are saturable, which means that once the enzymes are saturated, as the dose increases, disproportionately large increases in blood and brain concentrations occur, increasing risk of toxicity de la Torre, Farre, Ortuno, Mas et al. Top of page Pharmacodynamics The primary mode of action of MDMA is as an indirect serotonergic agonist, increasing the amount of serotonin released into the synapse Kalant, MDMA acts on the serotonin transporter and is transported into the nerve terminal. This promotes release of serotonin through the serotonin transporter by a process of transporter-mediated exchange. This process can lead to significant increases in serotonin available in the synapse. It is presumed that MDMA's effects on dopamine and noradrenaline release are mediated in a similar manner to the serotonin release. It has relatively low affinity for D1 and D2 dopamine receptors Battaglia et al. Users have reported the sensation of 'an expanded mental perspective' and 'improved self-examination'. Hallucinations are sometimes reported Peroutka et al. Repeated use of MDMA over a short time frame may lead to reduced drug effects, or tolerance. This has been observed in animal Frederick, Ali, Slikker, Gillam et al. Top of page Other behavioural effects Other psychological effects occurring during or after use of MDMA may include hyperactivity, racing thoughts, insomnia, mild hallucinations, depersonalisation, anxiety, agitation and bizarre or reckless behaviour Cohen, ; Siegel, Occasionally, this may lead to panic attacks, delirium, or brief psychotic episodes. In the few days following drug use, reduced appetite, depression, anxiety, difficulty concentrating, muscle aches and fatigue have been reported Cohen, ; Peroutka et al. Increased body temperature stems from the drug's effects on the thermoregulatory system in the brain, but is not always observed in experimental conditions Mas et al. In subsequent binges, the reduction in heart rate was more pronounced and was accompanied by hypotension, suggesting that binge administration may produce a different profile of cardiovascular effects than that observed from alternative dosing regimes. Increases in heart rate and blood pressure or myocardial oxygen consumption may be clinically relevant in producing adverse reactions. Top of page Toxicity Severe MDMA overdoses are associated with intense sympathomimetic responses and active hallucinations as well as thermoregulatory, neurologic, cardiovascular, hepatic and electrolyte disturbances Gowing, Henry-Edwards et al. Neurological symptoms include agitation, hallucinations, seizures, coma and acute and chronic psychiatric symptoms Kalant, ; Vaiva, Boss, Bailly, Thomas et al. Serotonin toxicity may occur in combination with antidepressants Kaskey, ; Vuori, Henry, Ojanpera, Nieminen et al. It has been suggested that jaw clenching commonly experienced by MDMA users may be a result of serotonergic overactivity Parrott, Cerebrovascular crises may also occur. MDMA-induced hyperthermia is modulated by serotonergic and dopaminergic systems. Severe hyperthermia can be associated with rhabdomyolysis, renal failure, disseminated intravascular coagulation, multiorgan failure and death Kalant, ; Screaton et al. There is a strong correlation between hyperthermia and poor survival rates in patients who have ingested ecstasy Kalant, Cardiovascular effects include hypertension, which results from the enhanced vasoconstrictive effects of monoamines. Hypotension resulting from depletion of these chemicals may also occur. Supraventricular and ventricular tachyarrhythmias with or without haemodynamic instability may also be present Kalant, Unlike other amphetamine derivatives, MDMA has not been reported to result in acute myocardial infarction. Use of MDMA may lead to various electrolyte disturbances. In healthy volunteers, a single ingestion There are isolated case reports of inappropriate vasopressin levels in MDMA users presenting with severe hyponatraemia. In particular, PMA is considered responsible for a number of ecstasy-associated deaths Becker et al. A considerable amount of research examining psychostimulants and neurotoxicity has focused on MDMA. In animal studies, administration of high dose MDMA leads to long-term depletion of serotonin, accompanied by reductions in other markers of serotonergic function including serotonin metabolites, transporters and serotonin-specific enzymes, degeneration of serotonergic axons and axon terminals and increased numbers of glial cells Commins, Vosmer, Virus, Woolverton et al. Although some animal studies have been criticised for utilising doses that are not representative of doses consumed by humans, other research in primates has demonstrated serotonergic alterations using doses similar to those used by humans Ricaurte et al. Nonetheless, it has been suggested that MDMA users at high risk for neurotoxic effects are those who use two or more street doses of MDMA at a time, those who use the drug fortnightly or more frequently, those who inject MDMA and those who use it for 24 hours or more Boot et al. The exact mechanisms of MDMA induced neurotoxicity are not known. Comments will b
