Wavedirect

Data collected through this service is used to: Allow sharing of test results sharable image for forums, etc. To improve the service offered to you for instance, to detect problems on our side No personal information is disclosed to third parties. If you want to have your information deleted, you need to provide either the ID of the test or your IP address. This is the only way to identify your data, without this information we won't be able to comply with your request. Speed Test Selecting a server Share results Test ID:. What data we collect At the end of the test, the following data is collected and stored: Test ID Time of testing Test results download and upload speed, ping and jitter IP address ISP information Approximate location inferred from IP address, not GPS User agent and browser locale Test log contains no personal information How we use the data Data collected through this service is used to: Allow sharing of test results sharable image for forums, etc. Your consent By starting the test, you consent to the terms of this privacy policy. Data removal If you want to have your information deleted, you need to provide either the ID of the test or your IP address. We believe that it's a conflict of interest when Internet service providers operate their own speed tests. A third party opinion is necessary and the provider shouldn't be allowed anywhere near the process. When providers host their own speed tests they eliminate the variables that you're here to test. Namely the Internet route itself. This test is unbiased, it tests and grades all providers on the same criteria. They want you to think your connection is running perfectly Other speed tests, especially tests offered by your Internet provider try to eliminate routing factors. This can make your connection appear faster than it really is. Truthfully, do you want to know how fast your connection is within your providers network or do you want to know how fast it is to the locations where the websites you visit are being hosted? Do you want to research connection speed for Wavedirect. This tool can average connection speed for any Internet provider, country or city in the world. So you can easily average speed test results, compare maximum speeds and research logged results for Wavedirect. Search again for up-to-date stats. Render: 0. How Fast is Wavedirect. When I had an issue it was sorted very quickly. Very happy customer - would recommend to anyone ". Stacey Jose-Saville. Best price. Above all, ALL issues - very minor as they were - resolved personally and with such amazing care - Messaged me back within 20 mins and couldn't have been more supportive. There is even a fantastic Facebook group with a member of the Wave team consistently contributing and helping customers out. This is the kind of reassurance I need when buying this kind of product - the hot tub itself is amazing! Atlantic plus - I had some issues after ordering the wrong filters but was all resolved quickly and without any further costs for postage. Would highly recommend this company above any other after researching many reviews - if you're going to buy a spa then look no further - satisfaction guaranteed! Amanda Edwards. Its very comfortable and spacious and I love going in on a night, for an hr just to wind down, with a glass or 2 of wine, best purchase made so far this year Thanks wave for my tub ". It was easy to follow the instructions for putting it together. It was great value for money, and easy follow up with filters

and chemical care". Lauren Humphreys. Your browser does not support embedded videos. Judith Shannon. Helpful Report. Kelly Sayers. Show Details. Linda Lockhart. Hi Linda! I look forward to you receiving your order! Kirsty Naylor Boustead. Hi Kirsty! Wave Spas is rated 4. Frequently Asked Questions. What's WaveSpa delivery like? Delivery is normally very quick if the item is in stock. Visit Wave Spas. Our Company. When setting up or troubleshooting your internet connection, the first step is to check the status of your cable modem. Identify the brand of your modem, and select it from the list below to view instructions on bringing your modem online. The Motorola Surfboard series cable modems all have five LED lights on the front indicating the network status. The lights indicate the following:. In addition to these five lights, the Motorola Surfboard SBseries cable modem has an additional light:. If your modem is unable to get online, you will want to reset it. Remove the power cord from the back of the modem, and let it sit without power for at least 30 seconds. Then restore power to the modem and determine if it can get online. If the modem cannot connect to the internet, please call our technical support department at WAVE so we can determine if a service call is required. If you have a router, you will want to disconnect power to the router while the modem is unplugged, and leave the router without power while the modem is getting connected to the internet. Once the power, receive, send and online lights are all solid, you can restore power to the router, and the activity light on the modem should turn on, either blinking or solid depending on your particular model of Surfboard modem. These indicate the following:. Once the cable light is solid, you can restore power to the router, and the PC light on the modem should turn on solid. Once you have connected your cable modem, the next step is to make sure that your computer has an internet connection from the modem. Once you have the modem installed you should be able to open your web browser Internet Explorer, Mozilla Firefox, Safari, etc. If this is not the case, you will need to verify your network settings, based on the operating system on your computer. If the modem is connected to the internet, but your computer is not getting online, you should check the network settings on your computer. If your modem is connected to the internet, but your computer is not getting online, you should check the network settings on your computer. If your modem is connected to the internet, but your computer is not getting online, you should check the network connection on your computer. If your modem is connected to the internet, but your computer is not getting online, you should check the network preferences on your computer:. Find out how we are prepared for Coronavirus. Network Set-Up. Connecting Your Modem When setting up or troubleshooting your internet connection, the first step is to check the status of your cable modem. Note: Trouble with your service? First step is to try rebooting your modem. The lights indicate the following: Power If the power light is blinking, your modem is not associated with your internet service. You will need to call our technical support department at WAVE to make sure your account is active and your modem is registered with our system. Receive If the receive light is blinking, your modem is connecting to the network. If it continues to blink without turning solid, there is no connection to the internet. Check the cable line that screws into the back of the modem and make sure it is secure. If necessary, bypass any splitter and run the cable directly from the outlet to the modem. Send If the send light is blinking, your modem has found a connection to the network and is establishing that connection. If the light continues to blink without turning solid, the signal is not stable enough for the modem to hold a connection. Check the cable line to the modem, and if necessary, bypass any splitter on the line. Choose the IP Address tab. Verify that Obtain an IP address Automatically is bulleted. Choose the Gateway

tab. Make sure nothing is under Installed Gateways. Online If the online light is blinking, your modem is securing a connection to the network that can be used to access the internet. Once the online light turns solid, the modem is connected. Activity If the activity light is blinking or solid, your modem is connected to your computer, or your router if you are using one. The next step is to make sure your computer or home network is online. In addition to these five lights, the Motorola Surfboard SBseries cable modem has an additional light: Standby If the standby light is on, your modem is in standby mode. To come out of standby mode and resume a normal connection, press the standby button on top of the modem. These indicate the following: Power If the power light is blinking, your modem is finding a connection to our network. If it continues to blink without turning solid, the modem is unable to establish the connection. Online If the online light is blinking, your modem is in standby mode. Cable If the cable light is blinking or solid, your modem is connected to the internet. If the USB light is blinking, your modem is showing current internet activity from your computer. Ethernet If the ethernet light is solid, your modem is connected to your computer, or your router if you are using one, using the ethernet cable in the back of the modem. If the ethernet light is blinking, your modem is showing current internet activity from your computer or home network. These indicate the following: Power If the power light is blinking, your modem is not associated with your internet service. Cable If the cable light is blinking orange, your modem is connecting to the network. If the cable light is solid orange, your modem has found a connection and is securing it. If the cable light is solid green, the modem has a connection. If it continues to remain blinking or solid orange, the modem cannot establish a connection to the internet. Status If the status light is blinking, your modem is registering its connection with our network. Once the status light is solid, your modem is online. ETH If the ETH light is solid, your modem is connected to your computer, or your router if you are using one, using the ethernet cable in the back of the modem. If the ETH light is blinking, your modem is showing current internet activity from your computer or home network. Connecting Your Computer Once you have connected your cable modem, the next step is to make sure that your computer has an internet connection from the modem. Windows 8 and 8. Move the cursor to the lower left hand corner of the screen to get the Start button to appear. For Windows 8. Right click on the Start button to get into the computer settings menu. Click Control Panel. Click on the Network and Internet icon. Click on the Network and Sharing Center icon. Click on Network that the computer is connected to , located at the top right, next to connections. Choose Properties.
